PROFESSIONAL SUMMARY:

Senior Software Engineer with 6+ years of experience building **scalable backend systems, microservices architectures, and workflow automation platforms** in cloud-native environments.

Specialized in **Java, Spring Boot, distributed systems, and event-driven architectures**, with strong expertise in designing high-availability services, orchestrating multi-system workflows, and improving system reliability at scale.

Proven ability to build **production-grade platforms integrating APIs, infrastructure systems, and data pipelines**, with a focus on performance, observability, and developer efficiency.

SKILLS

- **Backend & Distributed Systems:**
Java (6+ years) – Spring Boot – REST APIs – Microservices – Distributed Systems – Concurrency – High-Availability Systems
- **Cloud & Infrastructure:** AWS
(Lambda, S3, Athena, CloudWatch)
– Event-Driven Systems – Serverless Architecture – CI/CD – Observability
- **Data & Performance Engineering:**
PostgreSQL – MySQL – SQL Optimization – Indexing Strategies – High-Volume Data Processing

EXPERIENCE

Full-Stack Engineer / Backend Engineer (via TCS): UPS, NJ 11/ 2023 – Present

- Designed and developed **distributed microservices** to automate application onboarding and infrastructure provisioning workflows
- Built backend orchestration layer integrating **ServiceNow, Terraform, Vault, and internal APIs**, enabling end-to-end automation
- Implemented **event-driven workflows and asynchronous processing** for multi-step system interactions across distributed services
- Developed **high-availability services** handling concurrent requests across **distributed systems**, ensuring fault tolerance and minimizing service downtime
- Improved system reliability by implementing **centralized logging, monitoring, and observability pipelines**
- Designed reusable backend components to standardize **API integrations and workflow execution patterns**
- Optimized CI/CD pipelines for **consistent, reproducible deployments across environments**
- Reduced manual onboarding effort by **automating end-to-end workflows**, significantly improving provisioning **speed and operational efficiency**

Software Engineer – Avis Budget Group, (via TCS) NJ 12/2022 - 11/2023

- Designed and implemented **backend services using Java and Spring Boot** to support enterprise application integrations
- Built and maintained **REST APIs** enabling communication between internal systems and external SaaS platforms
- Developed **microservices** handling request routing, authentication flows, and system interoperability across distributed environments
- Implemented **robust error handling, retry mechanisms, and logging strategies** to improve system reliability
- Troubleshooted and resolved **production issues across distributed systems**, reducing failure rates and improving uptime
- Collaborated with cross-functional teams to design **scalable integration patterns and service interfaces**
- Improved system performance by optimizing request handling and reducing latency in service-to-service communication

Software Engineer – Amazon (Contract) NJ 10/2020 - 12/2022

- Built backend services and **serverless AWS components (Lambda, S3, Athena)** supporting scalable analytics and reporting platforms.
- Built **ETL pipelines** processing large-scale datasets using **AWS Athena and PostgreSQL**.
- Designed and optimized **complex SQL queries** using PostgreSQL and Athena to process **millions of records under high concurrency**.
- Improved query execution time through **index optimization and performance tuning**.
- Developed **REST APIs** and AWS Lambda functions for real-time and batch systems.
- Improved system reliability through structured monitoring and proactive issue resolution.

- **DevOps & Tooling:** Git – CI/CD Pipelines – Monitoring & Logging – Agile Development – Jira – Confluence – ServiceNow
- **Security & Identity:** OAuth 2.0 – OpenID Connect – SAML 2.0 – Authentication – Authorization – Token Management – SSL/TLS
- **Platform & Systems Engineering:** Workflow Automation – Platform Design – System Integration – Developer Experience – Observability – Diagnostics – Reliability Engineering

EDUCATION

**Bachelor of Science (B.S.):
Computer Science
(Summa Cum Laude)**
Kean University- Union, NJ

PROJECTS

UPS – Enterprise Identity Onboarding Platform

- Designed a platform enabling automated evaluation, configuration, and onboarding of applications into secure identity systems.
- Enabled repeatable and scalable workflows for application integration, secret management, and policy enforcement.
- Generated structured outputs and diagnostics, improving visibility into onboarding and authentication processes.

- UPS – Custom Universal Login Implementation

- Developed backend configuration services supporting a globally deployed authentication system across **40+ locales**.
- Implemented Post-Login Actions for dynamic claims and adaptive authentication.
- Balanced security controls with improved user experience.

Avis

- Partner SSO Integration (2023)

- Designed secure federation architecture with third-party partners using SAML and OAuth 2.0.
- Implemented token exchange, certificate rotation, and session validation workflows.

- Amazon – AWS QuickSight Analytics Dashboards (2021–2022)

- Built scalable backend services and analytics workflows on AWS supporting high-volume internal reporting systems.
- Designed and optimized **complex SQL queries** in PostgreSQL and Athena to process **millions of records efficiently under high concurrency**.
- Improved query execution time through indexing strategies, execution plan analysis, and performance tuning.
- Enhanced reliability and observability through structured monitoring and performance validation.
